The Workflows Client uses Java Help technology for presenting and indexing help topics. There are four methods of accessing WorkFlows Help topics:

1. Context-sensitivity: Locate a help topic for current wizard.
   Click the Help button on the current toolbar and context help will appear.
   Select Context from the Help menu, and context help will appear.
   Right-click the mouse over a wizard icon, select Help.

2. Table of Contents: Locate help topics that relate to a specific module.

3. Index: Locate help topic title, subject or keyword.
   Topics are organized alphabetically, specifically grouping wizard topics with their properties topics, "about" topics, and FAQs.

4. Search: Locate search questions, phrases, or keywords.
   Java Help full-text search uses natural language technology.
